

Glass Grade Oolitic Aragonite (Processed) — Technical Data

High-purity natural oolitic aragonite · Technical documentation

Technical Data

Glass Grade

Oolitic Aragonite (processed)

Oolitic aragonite - the world's only recent origin, renewable and sustainable performance mineral

Glass Grade Oolitic Aragonite (processed)

Exceptionally Pure calcium carbonate

Oolitic Aragonite that is used as the feed material in screening and drying operations to produce grades of glass grade aragonite. Fine, practically dust free oolitic aragonite sand for use in glass manufacture, this product is sold for the manufacture of high-quality flat glass and container glass. Because of its superior quality, aragonite can be used to produce specialty glass such as airplane windshields, laser lenses for the scientific community, and laboratory glassware for pharmaceutical and medical research. Since Aragonite melts at a lower temperature, it makes it a superb binder for the manufacturing process. It also requires less energy to complete the process, which translates to fuel saving and a reduced environmental impact (e.g., less CO₂ emissions).

Best choice for solar glass production

Aragonite has the lowest decrepitation due to its microcrystalline

Highest porosity

Highest surface area

Lower melting point / aragonite = 825C / limestone = 1,339C

Aragonite Composition Large surface area and porosity

Properties

Oolitic Aragonite

Specific Gravity

2.93+

Mohs Hardness

3.5 - 4

Crystal Structure

orthorhombic

Surface Area

1.82m²/g

Zeta Potential

- 6.65mV to - 33.85mV

Crystallinity

High

Micro porosity

Very high

The raw product makes exceptional oil, chemical and fluid sorbent, and mitigation tool for spills. Aragonite sorbents are more effective in removing heavy metals than calcitic limestone.
