

Sustainability

A framework for a carbon-negative mineral strategy

Ocean renewal, lifecycle thinking and permanent storage — evaluating aragonite within carbon-negative roadmaps.

Summary

Aragonite is part of the planet's natural carbon cycle: calcium carbonate is precipitated continuously in warm marine environments, and the Bahamas shallows are one of Earth's most prolific natural depositional zones for oolitic aragonite. AragoCor is building a credible, science-led roadmap for ocean-renewed minerals and lifecycle-aware industrial supply — framed as an evaluated strategy, not a verified claim, pending formal lifecycle analysis (LCA).

The roadmap

Ocean renewal

Aragonite is continuously precipitated in warm Bahamian shallows — a renewable mineral pathway.

Responsible sourcing

Single-source operations designed to minimize disturbance and document chain of custody.

LCA in progress

Formal lifecycle analysis being built with third parties to validate emissions accounting.

CCS partnerships

Open to research collaboration on mineral carbonation and ocean alkalinity enhancement.

The mineral carbon cycle

From atmospheric CO₂ to dissolved bicarbonate to oceanic calcium carbonate precipitation, aragonite sits at the heart of one of Earth's most important long-term carbon storage pathways. Because the same ocean chemistry that formed AragoCor's source deposit continues to operate today, the source itself is renewable at a planetary timescale — distinct from a quarried, finite limestone deposit.

Frequently asked questions

Conclusion

For sustainability, procurement and R&D; teams evaluating mineral inputs against a carbon-aware roadmap, AragoCor's ocean-renewed source and active LCA program offer a credible, science-led starting point for partnership — grounded in physical reality rather than marketing narrative.

This brief summarizes AragoCor's sustainability positioning for informational purposes and does not constitute a verified emissions or carbon-negative claim. © AragoCor Minerals LLC. info@aragocorminerals.com · +1 (855) 751-9100
